Please note that the swatches are a visual representation of what the colour should look like as the colour will vary with different computer screens.

Please purchase a 1 litre pot and try the colour out on your wall before you make your final purchase. Lighting has an effect on how you will see the colour.

We recommend you purchase a roller to do your samples and it is important to apply 2 coats of paint in an area approximately 90 x 90 in a shady and sun exposed space, to see the difference in colour according to the light.

Thank You

These computer rendered simulations show digital colour and may vary from the actual dry paint colour. The actual colour will vary depending on the gloss level, application method, film variance, substrate and light source. For critical colour matches, a sample of paint should be applied, allowed to dry, and checked before proceeding with the entire project.
